SUMMARY

Detail-oriented B.Tech Artificial Intelligence & Data Science student with hands-on experience in Python, Machine Learning, and Data Science, along with practical exposure to software development through an internship. Skilled in Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, Keras, SQL, and FastAPI, with experience working on machine learning and data-driven projects. Familiar with Git and GitHub for version control and collaborative development. Strong problem-solving skills with an interest in building practical, data-driven solutions. Seeking an AI/ML Engineer, Data Science, or Python Developer Fresher role to apply technical skills and grow in a collaborative engineering environment.

EDUCATION

Government College Of Engineering, Kolhapur — B.Tech, Artificial Intelligence And Data Science 2023 – 2027 (Expected)

INTERNSHIP EXPERIENCE

Campus Ambassador | Persevox Aug 2026 – Present

- Represented the organization as a Campus Ambassador and promoted its programs and opportunities among college students. Engaged with students through social media, peer networking, and campus-level outreach to increase awareness and participation.

Data Science & Analytics Intern | WeIntern Pvt Ltd Jul 2026 – Present

- I've started my internship as a Data Science & Analytics Intern at WeIntern. Over the next 6 months, I'll be getting hands-on experience with real-world projects, improving my technical skills, and learning how data science and analytics are used to solve practical problems.

Machine Learning Intern | Congnifyz IT Solutions Pvt Ltd Jun 2026 – Jul 2026

- Worked on practical Machine Learning tasks using Python, Pandas, NumPy, and Scikit-learn, including data preprocessing and model development. Gained hands-on experience in data analysis, model evaluation, and applying ML techniques to real-world datasets.

GenAI Powered Data Analytics Job Simulation | Tata Technologies Aug 2025 – Jan 2026

- This experience strengthened my understanding of how GenAI can enhance data-driven decision-making, especially in risk analytics and financial services

Artificial Intelligence Intern | Codec Technologies Jul 2025 – Aug 2025

- Developed problem-solving, analytical thinking, and professional work ethics, This internship strengthened my understanding of real-world AI applications and enhanced my readiness for industry-level roles in Artificial Intelligence and Data Science.

Artificial Intelligence Intern | Codtech IT Solution Pvt Ltd Jul 2025 – Aug 2025

- Collaborated effectively with team members in a professional environment, This internship enhanced my technical foundation in AI and strengthened my ability to work in a structured, industry-oriented setting.

Python Intern | ECS Technologies Jul 2024 – Aug 2024

- I worked with popular Python libraries such as NumPy, Pandas, Matplotlib, and Scikit-learn. I used Pandas and NumPy for data manipulation, cleaning, and basic analysis, while Matplotlib was used to create visualizations and understand patterns in datasets.

PROJECTS

College Notes Management System

- A College Notes Management System built using PHP, MySQL, HTML, CSS, JavaScript, and Bootstrap. This web-based platform enables students to access subject-wise notes, previous year question papers (PYQs), and study materials while allowing administrators to efficiently manage and upload academic resources.

Movie Recommendation System

- A Content-Based Movie Recommendation System built using Python, Machine Learning, and Natural Language Processing (NLP). This project recommends movies by analyzing similarities between genres, plot descriptions, and cast information from the IMDb Top 1000 Movies Dataset using TF-IDF Vectorization and Cosine Similarity.

House Price Prediction Using Machine Learning

- A comprehensive House Price Prediction project built using Python and Machine Learning techniques. This project focuses on predicting house prices by analyzing property features through data preprocessing, feature engineering, regression modeling, and performance evaluation.

Exploratory Data Analysis (EDA) On Public Dataset

- A comprehensive Exploratory Data Analysis (EDA) project built using Python and popular data analysis libraries. This project focuses on cleaning, analyzing, and visualizing a real-world dataset to uncover meaningful insights and understand data patterns through statistical analysis and interactive visualizations.

SKILLS

Programming: Python, SQL

Machine Learning & Deep Learning: Scikit-learn, TensorFlow, PyTorch, Keras

Data Science & Databases: Pandas, NumPy, SQL, MySQL, DBMS, MongoDB

Tools: Git, GitHub, VS Code, XAMPP

Web & API Development: React.js, JavaScript, FastAPI, HTML5, CSS3

Core CS: Object-Oriented Programming (OOP), Data Structures & Algorithms, Problem Solving
